

**Maybe -G-d forbid-useful for ageing parents. I have seen this.**

**Often useful in older people: suspicious, paranoid everybody deceives him/her/, jealous [partner is unfaithful]**

**Delusions of being poisoned, being followed/watched.**

**May lose feeling of decorum [undressing!]**

***Fumbles all the time with his hands, picks at face,lips,fingers clothes.* This is very easy to recognize if you pay attention to the patient**

**And sometimes very useful for a dry, spastic cough which is worse when lying down,has to sit up and the cough is worse when talking or drinking.**

**In children there may be a strong jealousy because they always feel [without reason] that the other children are favoured by the parents.**
